Brain Injury Association of Illinois

The Brain Injury Association of Illinois (BIA of IL) is a not-for-profit, statewide membership organization comprised of people with brain injuries, family members, friends and professionals. BIA of IL is part of a network of brain injury associations across the United States, and is a subsidiary of the national Brain Injury Association, Inc. (BIA) which was founded in 1980. BIA of IL serves people with TBI, their families, and the professionals who treat them by providing information, education, advocacy and support. BIA of IL acts as an information/resource clearinghouse, sponsors annual educational programming, facilitates statewide support groups, hosts adult and pediatric recreational camps, participates in legislative advocacy, fosters prevention awareness, and encourages TBI research.

Shirley Ryan Ability Lab (formerly the Rehabilitation Institute of Chicago)

Brain Innovation Center

In the Shirley Ryan AbilityLab, the Brain Innovation Center includes three floors (23-25) of inpatient care, with more than 100 beds, and accommodates patients with diverse brain conditions and medical needs. The entire Center is the largest of the AbilityLab's Innovation Centers in patient volume and staffing. This Center's focus is on promoting brain healing and recovery, and offers the world's best in medical and nursing care, diagnostic support and translational neuroscience research.

The top floor of the Brain Innovation Center is dedicated to medical/nursing support of patients with the most severe and fragile conditions affecting fundamental brain functions (e.g., arousal, lucidity, awareness, sensory, perception, motivation, information-processing/thinking, communication, memory and learning). This floor provides a calming/non-distracting environment to facilitate brain healing. Even the unique walls on this floor — which are curved — are acoustically designed to dampen sound.

Research activity includes pharmacotherapeutic applications, brain neuromodulation using external or implanted brain stimulators, use of smart devices and emerging technologies, and the potential application of biologic materials and therapies specific for neural action. In the Shirley Ryan AbilityLab's Brain Innovation Center, we continue actively pursuing research and application in promising, potentially groundbreaking, interventions such as regenerative medicine
